## Notice of Establishment of a Subsidiary (previously released)

Procedures for the establishment of the subsidiary mentioned in Notice of Establishment of a Subsidiary released on May 9, 2019, have been completed. Please be informed that matters undecided at the time of that release have been revised and decided as follows. Those matters are underlined>.

### 1. Background and Objective of the Establishment of the Subsidiary

The Company has promoted business as a fabless semiconductor maker with strengths in research and development of graphics LSI and compression/decompression technologies. Through that business, the Company has cultivated research in elemental technologies for differentiation. With its concerted effort including from that research to hardware and software efforts that facilitate productization as a strength, it is also focusing on commercialization in the four areas of middleware, machine learning, security, and blockchain. Therefore, the Company decided to establish a subsidiary with the objective of early commercialization in the areas of machine learning and middleware. In addition to AI business with “AILIA,” which we developed independently as a deep-learning framework, at its core, the business will focus on expanding sales of “AXIP Series” middleware, aimed mainly at the gaming market. In addition, we will take measures for the early establishment of a pillar of new profits through the creation of new business, by inviting Mr. Takehiko Terada, who possesses deep expertise in the fields of AI and machine learning, and abundant management experience in middleware business, to be Representative Director.
